

**Prof. Lennart Hardell MD, PhD (Sweden)** is a specialist oncologist and a cancer epidemiologist at Örebro University. Prof. Hardell has as a long career as a clinical and medical research doctor. He has a focused interest in environmental risk factors for cancer that he has studied in epidemiological investigations. He was a Research fellow at the School of Public Health, University of California, Berkeley, USA in 1985. Over the years Prof. Hardell has been awarded several scientific prizes for his research. In the late 1970's and early 1980's he was the first to show an increased risk for cancer in persons exposed to phenoxy herbicides and contaminating dioxins. His research group has also conducted studies on the relationship between persistent organic pollutants and cancer risks, such as PCB and the risk for malignant lymphoma. In recent years much of Prof. Hardell's research has focused on the use of mobile phones and cordless phones and the risk of brain tumours. His research has contributed to the cancer classification of different agents such as TCDD, PCB, the herbicide glyphosate, and radiofrequency fields. He has published more than 300 peer-reviewed scientific articles.
