

Prof. Colin Butler, BMedSci (Hons), BMed, DTM&H, Dip Epi, MSc (Epi), PhD. After leaving a full-time Professorship in Public Health at the University of Canberra in 2016, Colin Butler currently serves as an Adjunct Professor there and also as a visitor at the Australian National University. He worked as a GP in Tasmania full time from 1988-96 before focussing mostly on academic public health. In 2009 the French Environmental Health Association named him as one of “a hundred doctors for the planet”. In 2014 he became the first contributor to the health section of the Intergovernmental Panel on Climate Change report to be arrested for civil disobedience, protesting the Maules Creek coal mine in NSW. He is editor of the book “Climate Change and Global Health” and senior editor of “Health of People, Places and Planet: Reflections Based on Tony McMichael’s Four Decades of Contribution to Epidemiological Understanding”. Prof. Butler has published over 200 articles, chapters and letters in scholarly journals since 1991, the first of which was a letter to the Medical Journal of Australia about ecological loss, climate change and the risk to our species. In 2001 he helped to found Doctors for the Environment, Australia. In 1989 Colin co-founded the NGOs BODHI and BODHI Australia. These NGOs work together with partners in India and Bangladesh to promote health and development.
