

Emeritus Prof. Henry Lai, PhD (USA) has a long research career at the University of Washington, focused on the biological effects of non-ionizing electromagnetic fields (from extremely-low frequency to radiofrequency) and their possible medical applications with research end points covering molecular biology, neurochemistry, and behaviour. He had a further interest in the development of artemisinin and its analogs for cancer treatment and prevention. From 2009 to present, Prof. Lai has served as Editor-in-Chief of the international peer-reviewed journal *Electromagnetic Biology and Medicine*. He has been an Honorary Professor, at the Tropical Medicine Institute, Guangzhou University of Traditional Chinese Medicine, China from 2002 to present. Prof. Lai has published over 100 peer-reviewed research publications. In 2011, *The Seattle Magazine* named Prof. Lai as one of the most influential people in Seattle in 2011.
