

Mr. Steve Weller, BSc (Biochemistry and Microbiology) is a professional in the IT field. He is a public representative on the Electromagnetic Energy Reference Group (EMERG) committee at the Australian Radiation Protection and Nuclear Safety Agency (ARPANSA) that meets bi-annually. Mr. Weller first became interested in RF bioeffect/health research after a number of people in Victoria personally complained of health problems that only developed after smart meters were installed on their homes. He began to review Australia's RF Standard in 2011 and then established a document that captured the peer-reviewed RF bio- effect literature. By categorising papers and using meta-data tags, Steve began to notice a pattern developing. This document was the forerunner to the establishment of the current ORSAA database. Mr. Weller has presented to the EMERG committee on the topics of Electromagnetic Hypersensitivity (EHS) and RF Bio- Effects findings.
